what can research in cognitive psychology offer the growth of educational technology and instructional media originally published in 1988 this book argues that for much of its history educational technology has been concerned with justifying and verifying the basic assumption that the processes and products of technology can improve instructional effectiveness the result is seen as a systems approach grounded in empiricism and the failure to incorporate much important research in cognitive psychology the book argues that it is now time for educational technology to come to terms with new ideas in cognitive and particularly constructivist psychology and it both advocates and describes the forging of new links between the two disciplines

translating picturebooks examines the role of illustration in the translation process of picturebooks and how the word image interplay inherent in the medium can have an impact both on translation practice and the reading process itself the book draws on a wide range of picturebooks published and translated in a number of languages to demonstrate the myriad ways in which information and meaning is conveyed in the translation of multimodal material and in turn the impact of these interactions on the readers experiences of these books the volume also analyzes strategies translators employ in translating picturebooks including issues surrounding culturally specific references and visual and verbal gaps and features a chapter with excerpts from translators diaries written during the process highlighting the complex dynamics at work in the translation process of picturebooks and their implications for research on translation studies and multimodal material this book is an indispensable resource for students and researchers in translation studies multimodality and children s literature

many of the earliest books particularly those dating back to the 1900s and before are now extremely scarce and increasingly expensive we are republishing these classic works in affordable high quality modern editions using the original text and artwork

scientific and technological texts have not played a significant role in modern literary criticism this applies to classics too despite the fact that a large part of the field s extant texts deal with questions of medicine mathematics and natural philosophy focusing mostly on medical and mathematical texts this collection aims at approaching ancient

greek science and its texts from the cross disciplinary perspective of authorship among the questions addressed are what is a scientific author in what respect does scientific writing differ from literary writing how does the author present himself as an authoritative figure through his text what strategies of trust do these authors employ these and related questions cannot be discussed within the typical boundaries of modern academic disciplines thus most of the sixteen authors many of them leading experts in the fields of ancient science bring a comparative perspective to their subjects as a result the collection not only offers a new approach to this vast area of ancient literature thus effectively discovering new possibilities for literary criticism it also reflects on our current forms of scientific and scholarly written communication
